How to use:

1. Set out two sets of ten counters, preferably in two different colors
2. Help the student use the number line to count out the counters, placing them over the number line as they count them.
3. Help the student write the correct answer. If your child can't write numbers yet, use stamps, or you write the answer for him/her and have the student trace your answer.

OR

1. Print out the number strips on card stock and cut out.
2. Help your child line up the correct the number strips above the number line on the worksheet to figure out the answer.
